

# SNUBmonkey™

Everything Linux Tutorial

Learn without ever leaving your browser.  
We actually test things and try very hard  
to come up  
with unique and original content.

## TOP FIVE (5) MOST COMMONLY USED COMMANDS\*

1. `ls` : Lists the contents of a directory.

Usage: `ls [options] [directory]`

Example: `ls -l` (lists files in long format showing details like permissions, owner, size, and modification date).

2. `cd` : Changes the current directory.

Usage: `cd [directory]`

Example: `cd /home/snubmonkey` (changes to the `/home/snubmonkey` directory).

3. `pwd` : Prints the working directory.

Usage: `pwd`

Example: `pwd` (outputs the full path of the current directory).

4. `cp` : Copies files or directories.

Usage: `cp [source] [destination]`

Example: `cp snub.txt monkey.txt` (copies `snub.txt` to `monkey.txt`).

5. rm : Removes (deletes) files or directories.

Usage: rm [options] [file/directory]

Example: rm stat.txt (deletes stat.txt).

Adding -r option allows removing directories and their contents recursively.

*\*These commands serve as the backbone of everyday operations.  
We hope to see you shortly.*
